

## Rice Husk Dryer

Rice husk dryer

Capacity: 300 to 400kg/hr

Power: 4kW

Material can be powder, sawdust, straw, and rice husk

Suitable for drying materials like sawdust, rice hull, milling wheat straw, corn stalks, and so on

The moisture of wet materials is at 20 to 30%

The rice husk dryer is equipped one fuel boiler, inlet, steel pipe, exhaust blower (fan), cyclone

Wet materials are input into the hopper

The fuel boiler generates hot air which mixes with wet materials and then is sucked into the pipes by the exhaust blower (fan) quickly

And then hot air is flowing and going through the curving pipes and buffer (drying chamber) of dryer, thus wet materials is finished to dry, and the dried materials are expelled out by the exhaust blower (fan)

This rice husk dryer reduces the moisture to 8 to 12% with the advantages of lower cost consumption and high efficiency
